

# The `tablefootnote` package

H.-Martin Münch  
<Martin.Muench at Uni-Bonn.de>

2014/01/26 v1.1c

## Abstract

This L<sup>A</sup>T<sub>E</sub>X package provides the command `\tablefootnote` to be used in a `table` or `sidewaystable` environment, where `\footnote` will not work and when using `\footnotemark` and `\footnotetext` and adjusting the counters (including `Hfootnote`) manually is either too much work or would not even work (`sidewaystable`).

# 1 Introduction

This L<sup>A</sup>T<sub>E</sub>X package provides the command `\tablefootnote{...}` to be used in a `table` or `sidewaystable` environment. In those environments `\footnote{...}` would not work and would need to be replaced by `\footnotemark` in the `(sideways)table` and `\footnotetext{...}` after the `(sideways)table` environment ended. Additionally the counters for `footnote` and (when the `hyperref` package is used) `Hfootnote` would need to be adjusted manually. Then still the hyperlinks in a `(sideways)table` would not work. When the `footnotebackref` package is used, `\footnotemark` and `\footnotetext{...}` would need to be redefined. Just using `\tablefootnote{...}` (with optional argument for custom foot note marks) in the `(sideways)table` does all this automatically. (Compatibility with the `footnotebackref` package was achieved without redefining `\footnotemark` or `\footnotetext`.) Redefining `\footnote` was *not* done as to not create conflicts with other packages.

## 2 Usage

Just load the package placing

```
\usepackage{tablefootnote}
```

in the preamble of your L<sup>A</sup>T<sub>E</sub>X 2<sub>ε</sub> source file and use `\tablefootnote{...}` instead of `\footnote{...}` and `\tablefootnote[...]{...}` instead of `\footnote[...]{...}` in `(sideways)tables`. When the `footnotebackref` package is used, it must be loaded before the `tablefootnote` package and the `hyperref` package with option `hyperfootnotes=true` must be loaded, too. (Backreference-links without links do not make sense.) When the `rotating` package (for `sidewaystables`) is used, it must be loaded before the `tablefootnote` package and it must be a recent version (v2.16a, 2009/03/28, or newer).

If `\tablefootnote{...}` is used in a tabular environment, which is inside of a `(sideways)table` environment, everything is fine, but when the tabular environment is not inside of a `(sideways)table`, the `tablefootnote` will not work.

Pages with tables with footnotes, which are rotated with the `lscap`- or with the `pdflscape`-package (`\begin{landscape}`, `table`, `\end{landscape}`), are possible. But when the `footmisc`-package is used, `(pdf)lscap` should be loaded before `footmisc`.

When the `footmisc`-package is used with option `para`, this is regarded with the exception of a `sidewaystable`. There the footnotes are printed one below the other. (Well, this is better than no footnote in a `sidewaystable` at all, isn't it?)

When the `(sideways)table` floats, the footnotes are set and (when `hyperref` is used) hyperlinked, but they are not automatically adapted when the table floats over/under another footnote. Thus either do not use a footnote between original and float position of the `(sideways)table`, or place the `(sideways)table` in "here" position. `\clear(double)page`, `h(!)`, `H` from the `float` package (<http://www.ctan.org/pkg/float>), or `\FloatBarrier` from the `picins` package (<http://www.ctan.org/pkg/picins>) might help, too. (Or after finishing the document, move the `(sideways)table` in the source code near the position where it floats to or use the optional footnote marks.)

### 3 Alternatives

- The `longtable` package provides the `longtable` environment as replacement for the combined `table` and `tabular` environments. Footnotes are real footnotes (not just tablenotes), are continuously numbered and hyperlinked (when using the `hyperref` package), and the hyperlinks really work. As drawback the appearance of the caption changes slightly (e. g. distance to the table, width of the caption), which can probably be changed back manually. Furthermore, longtables are meant to break over more than one page. If that is not wished, it must be prevented by `\nopagebreak`-commands and by ending the longtable lines with `\\*` instead of `\\`. longtables do not float. (Therefore using the `tablefootnote` package and `\FloatBarrier` from the `picins` package before and after the table environment is similar - but `tablefootnote` does not change the table-caption!) `sidewaystable` does not work with it.  
<http://www.ctan.org/pkg/longtable>
- The `supertabular` package provides the `mpsupertabular` environment as replacement for the combined `table` and `tabular` environments. Footnotes are just tablenotes (with working hyperlinks when using the `hyperref` package), i. e. numbered a, b, c and placed below the table and not at the end of the page. Therefore there is no float problem (because the tablenotes numbering is not included in the continuous numbering of the footnotes). Placing the `supertabular` inside of a `sidewaystable` breaks the hyperlinks to the tablenotes.  
<http://www.ctan.org/pkg/supertabular>
- The `ctable` package has its very own notation for defining tables. It can create tablenotes and sideways-tables. The tablenotes are not automatically hyperlinked. The `ctables` float. Because the tablenotes numbering is not included in the continuous numbering of the footnotes there is no float problem.  
<http://www.ctan.org/pkg/ctable>
- The `footnote` package provides `\makesavenoteenv{table}`. After loading the package and using that command in the preamble, in tables `\footnote{...}` can be used. Using `\makesavenoteenv{tabular}` and `\makesavenoteenv{sidewaystable}` is possible, but it neither solves the float problem, nor do the created hyperlinks work (i. e. they aim at wrong locations). The `mdwtab` from the same bundle is incompatible with other table-related packages (e. g. `supertabular`, `array`) and not 100% compatible with the `tabular` environment.  
<http://www.ctan.org/pkg/footnote>  
<http://www.ctan.org/pkg/mdwtab>
- The `tabularx` package does produce footnotes for `sidewaystable`s, but uses a, b, c instead of 1, 2, 3. The hyperlinks to the footnotes do not work. Because the footnotes numbering is not included in the continuous numbering of the other footnotes there is no float problem.  
<http://www.ctan.org/pkg/tabularx>
- Placing a `tabular` inside a `minipage` inside a table produces tablenotes. Therefore there is no float problem (because the footnotes are not continuously numbered). The hyperlinks to the table notes indeed work.

- The `threeparttable` package creates tablenotes again. Therefore there is no float problem (because the tablenotes are not continuously numbered with the footnotes). There are no hyperlinks to the table notes (at least not automatically). Using `sidewaystable` (with table notes) works.  
<http://www.ctan.org/pkg/threeparttable>
- The `threeparttablex` package creates tablenotes again. Therefore there is no float problem (because the tablenotes are not continuously numbered with the footnotes). With option `referable` the tablenotes are hyperlinked. Use of a `sidewaystable` (with table notes) did not work for me. When using the `referable` option according to the example in the `threeparttablex` manual the `longtable` package is used, therefore that package could be used directly without `threeparttablex` (see above).  
<http://www.ctan.org/pkg/threeparttablex>
- One can manually use `\footnotemark` in the table and `\footnotetext{...}` after the table environment ended and manually change the `footnote` and (when the `hyperref` package is used) `Hfootnote` counters and needs to insert

```

\makeatletter
\global\let\Hy@saved@currentHref\@currentHref
\hyper@makecurrent{Hfootnote}%
\global\let\Hy@footnote@currentHref\@currentHref
\global\let\@currentHref\Hy@saved@currentHref
\makeatother

```

before each `\footnotetext{...}`, but with more than very few footnotes this can become much work (and is prone to produce errors). And this does not even work with `sidewaystables`. (And it does not work with the `footnotebackref` package without redefining `\footnotemark` and `\footnotetext{...}`.)

(You programmed or found another alternative, which is available at [CTAN](#)? OK, send an e-mail to me with the name, location at [CTAN](#):, and a short notice, and I will probably include it in the list above.)

## 4 Example

30 \usepackage[tablefootnote][2014/01/26]% v1.1c
31
32 \gdef\unit#1{\mathord{\thinspace\mathrm{#1}}}%
33 \listfiles
34 \begin{document}
35 \pagenumbering{arabic}
36 \section*{Example for tablefootnote}
37
38 This example demonstrates the use of package\newline
39 \textsf{tablefootnote}, v1.1c as of 2014/01/26 (HMM).\newline
40 There were no options used. (The package provides no options.)\newline
41
42 \textbf{The \texttt{tablefootnote-example.tex} needs to be compiled
43 at least twice to get the references right!}\newline
44
45 If the etoolbox-package is found, it is automatically used.\newline
46
47 For more details please see the documentation!\newline
48
49 \noindent Save per page about $200\unit{ml}$ water,
50 $2\unit{g}$ CO$_{2}$ and $2\unit{g}$ wood:\newline
51 Therefore please print only if this is really necessary.\newline
52
53 Here is some text.\footnote{And this is a text footnote.}\newline
54
55 Tables \ref{tab.symbol}, \ref{tab.normal}, \ref{tab.another} and
56 \ref{tab.floatH} show normal tables, table~\ref{tab.sideways} depicts
```

```

57 a sideways table. Table~\ref{tab.floatH} uses the float
58 specifier~\texttt{H} from the float package.\newline
59
60 \texttt{Hyperref} option \verb|pdfview=FitH| and \verb|FitBH| do
61 not work due to a bug in pdf\TeX{}, computing wrong
62 anchor coordinates (\textsc{Heiko Oberdiek}, 29.~October 2011).
63 Depending on used pdf-viewer, hyperlinks in sideways tables lead
64 e.\,g.\,at the end of the document, not at the footnote.
65 \verb|pdfview=Fit|, \verb|FitV|, \verb|FitR|, \verb|FitB|,
66 \verb|FitBV| work, print is OK for all those options.
67
68 \bigskip
69
70 \listoftables
71
72 \pagebreak
73
74 \renewcommand{\thefootnote}{\fnsymbol{footnote}}
75 \verb|\renewcommand{\thefootnote}{\fnsymbol{footnote}}|
76 causes footnote{-}symbol{-}footnotes, which are possible
77 (see Table~\ref{tab.symbol}).
78
79 \begin{table}
80 \centering
81 \begin{tabular}{ccc}
82 Another\tablefootnote{A table footnote.} & & %
83 text\tablefootnote{Another table footnote.} & & %
84 in a table\tablefootnote{A third table footnote.}
85 \end{tabular}
86 \caption[A footnotesymbol table]{%
87 A table with footnote-symbol-footnotes.\label{tab.symbol}}
88 \end{table}
89
90 Some text.\footnote{A text footnote.}
91
92 \renewcommand{\thefootnote}{\arabic{footnote}}
93 \verb|\renewcommand{\thefootnote}{\arabic{footnote}}|
94 switches back to normal footnote numbers again.
95
96 \pagebreak
97
98 \begin{table}
99 \centering
100 \begin{tabular}{ccc}
101 Some\tablefootnote{A table footnote.} & & %
102 text\tablefootnote[99]{A table footnote with custom footnote number.} & & %
103 in a table\tablefootnote{A third table footnote.}
104 \end{tabular}
105 \caption[A table]{A normal table.\label{tab.normal}}
106 \end{table}
107
108 Some text.\footnote{Another text footnote.}
109
110 \pagebreak
111

```

```

112 More text.\footnote{And yet another text footnote.}
113
114 \begin{table}[t]
115 \centering
116 \begin{tabular}{|c|c|c|}
117 \hline
118 Another\tablefootnote{A $3^{rd}$ table footnote.} & %
119 text\tablefootnote{Another $3^{rd}$ table footnote.} & %
120 in a table\tablefootnote{A $3^{rd}$ third table footnote.}\ \hline
121 \end{tabular}
122 \caption[Another table]{Another table (third one)\label{tab.another}}
123 \end{table}
124
125 Please note that Table~\ref{tab.another} floated to the top of the page.
126 While the footnotes are set and (when hyperref is used) hyperlinked,
127 they are not automatically adapted. Thus either do not use a footnote
128 at the same page before the table, or place the table in
129 \textquotedblleft here\textquotedblright\ or
130 \textquotedblleft bottom\textquotedblright\ position.
131 \verb|\clear(double)page|, \verb|h(!)|, \verb|H|~from the
132 \texttt{float} package, or \verb|\FloatBarrier| from the
133 \texttt{picins} package might help, too. (Or move the table in the
134 source code near the position where it floats to
135 or use the optional footnote marks.)
136
137 Table~\ref{tab.floatH} (page~\pageref{tab.floatH}) uses float specifier
138 \texttt{H} from the float package and does not float.
139
140 Some text.\footnote{This is just another text footnote.}
141
142 \pagebreak
143
144 \FloatBarrier
145
146 \begin{sidewaystable}
147 \centering%

181
182 End of the example for the
183 tablefootnote\footnote{\url{http://www.ctan.org/pkg/tablefootnote}}
184 package.
185
186 \end{document}
187 </example>

```

## 5 The implementation

We start off by checking that we are loading into L<sup>A</sup>T<sub>E</sub>X 2<sub>ε</sub> and announcing the name and version of this package.

```
188 (*package)
189 \NeedsTeXFormat{LaTeX2e}[2011/06/27]
190 \ProvidesPackage{tablefootnote}[2014/01/26 v1.1c
191         Table foot notes (HMM)]
```

A short description of the tablefootnote package:

```
192 %% Provides the \tablefootnote[...]{...} command
193 %% for footnotes in (sideways)tables.
194
```

We need the ltxcmds and letltxmacro packages by HEIKO OBERDIEK:

```
195 \RequirePackage{ltxcmds}[2011/11/09]%      v1.22
196 \RequirePackage{letltxmacro}[2010/09/02]% v1.4
197 \RequirePackage{xifthen}[2009/04/17]%     v1.3
```

A last information for the user:

```
198 %% tablefootnote may work with earlier versions of LaTeX and those
199 %% packages, but this was not tested. Please consider updating
200 %% your LaTeX and packages to the most recent version
201 %% (if they are not already the most recent version).
202
```

See subsection 6.1 about how to get them.

When the rotating package (for sidewaystables) is used, it must be loaded before the tablefootnote package and it must be a recent version:

```
203 \@ifpackageloaded{rotating}{%
204   \gdef\tfn@rotating{1}
205   \@ifpackagelater{rotating}{2009/03/28}% v2.16a
206   {% >= 2009/03/28, OK
207   }{% else
208     \PackageWarningNoLine{tablefootnote}{%
209       It is required version\MessageBreak%
210       2009/03/28 v2.16a (or later) of package rotating,\MessageBreak%
211       but only version\MessageBreak%
212       ‘\csname ver@rotating.sty\endcsname’\MessageBreak%
213       is available}%
214   }%
215 }{% else
216   \gdef\tfn@rotating{0}%
217 }
218
```

There are no options to be processed.

We need some definitions:

```
219 \def\tfn@footnotetablecount{0}
220 \def\tfn@footnotetableprint{0}
221 \def\tfn@footnotezero{0}
222 \def\tfn@fnt{0}
223 \def\tfn@swt{0}%      _s_ide_w_ays_t_able
224 \def\tfn@fmpw{\relax}% f_oot_m_isc_p_ara_w_arn-switch
225 \def\tfn@fnbr{0}%    f_oot_n_ote_b_ack_r_ef(erence package)
226
```

`\tfn@hyperfootnotes` We need a wrapper for the used `\ifHy@hyperfootnotes`, which is not defined when the `hyperref` package has not been loaded:

```

227 \DeclareRobustCommand{\tfn@hyperfootnotes}[2]{%
228   \ifHy@hyperfootnotes%
229     #1%
230   \else%
231     #2%
232   \fi%
233 }
234

```

`\tablemakefntext` `\tablemakefntext` makes the `footnotetext` for a footnote in a table.

```

235 \ltx@ifpackageloaded{footnotebackref}{%
236   \gdef\tfn@fnbr{1}%
237   \ifx\FootnoteBackref@symbol\empty%
238     \ifFootnoteBackref@numberlinked%
239       \newcommand\tablemakefntext[1]{%
240         \noindent\makebox[1.634em][r]{%
241           \mbox{\textsuperscript{\normalfont%
242             \hyperlink{tfn:m\theHfootnote}{\@thefnmark}%
243           }}}%
244         \ #1%
245       }
246     \else
247       \newcommand\tablemakefntext[1]{%
248         \noindent\makebox[1.8em][r]{%
249           \mbox{\textsuperscript{\normalfont%
250             \@thefnmark%
251           }}}%
252         #1%
253       }
254     \fi
255   \else
256     \newcommand\tablemakefntext[1]{%
257       \noindent\makebox[1.8em][r]{%
258         \mbox{\textsuperscript{\normalfont%
259           \ifFootnoteBackref@numberlinked%
260             \hyperlink{tfn:m\theHfootnote}{\@thefnmark}\ %
261           \else%
262             \@thefnmark%
263           \fi%
264         }}}%
265       \hyperlink{tfn:m\theHfootnote}{\FootnoteBackref@symbol}%
266       #1%
267     }
268     \fi
269 }{%
270   \newcommand\tablemakefntext[1]{%
271     \noindent\makebox[1.8em][r]{%
272       \mbox{\textsuperscript{\normalfont%
273         \@thefnmark%
274       }}}%
275     #1%
276   }
277 }
278

```

`\swtablemakefntext`

```
279 \newcommand\swtablemakefntext[1]{\noindent\ #1}
280
```

`\tfn@footnotemarks`

`\tfn@footnotemarks` uses the `\footnotemark` command to place a foot note mark and decreases the `\tfn@footnotetablecount` (i. e. increases the negative value) of the number of footnote(marks) in the table. If the `footnotebackref` package is used, it is also necessary to create an according `\hypertarget` for the back reference.

```
281 \newcommand{\tfn@footnotemarks}[1] [] {%
282   \hbox{%
283     \ifthenelse{\isempty{#1}}{%
284       {\footnotemark%
285         \ltx@ifpackageloaded{footnotebackref}%
286           {\raisebox{\ht\strutbox}{\hypertarget{tfn:m\theHfootnote}{}}}%
287           {% footnotebackref not loaded
288             }%
289         }%
290       {\ltx@ifpackageloaded{hyperref}%
291         {\tfn@hyperfootnotes{%
292           \hyperlink{tfn:#1}{\footnotemark[#1]}}%
293           }{\footnotemark[#1]}}%
294         {\footnotemark[#1]}}%
295       \ltx@ifpackageloaded{footnotebackref}%
296       {\raisebox{\ht\strutbox}{\hypertarget{tfn:m#1}{}}}{}}}%
297   }%

`\tfn@footmiscparawarn`

When the `footmisc` package is used with option `para`, we need to issue a warning. (Any idea how to resolve this issue?) It must be given inside of it's own command, because `\ifFN@para` is not defined when `footmisc` has not been loaded, and then the `\fi` would be a `\fi` without `\if` (and  $\TeX$  does not like single `\fis`).

```
304 \newcommand{\tfn@footmiscparawarn}{%
305   \ifFN@para%
306     \PackageWarning{tablefootnote}{%
307       Package footmisc with option para used.\MessageBreak%
308       Unfortunately package tablefootnote is not yet\MessageBreak%
309       able to regard this in sidewaysables.\MessageBreak%
310       Here the footnotes are printed one below\MessageBreak%
311       the other. Sorry!\MessageBreak%
312     }%
313   \fi%
314 }
315
```

`\tfn@updateHyper`

`\tfn@updateHyper` updates some `hyperref` internals.

```
316 \newcommand{\tfn@updateHyper}{%
317   % The code of this command is partly from the
318   % hyperref package by Heiko Oberdiek, 2011/10/01, v6.82j.
319   % Newer versions of that package are available at CTAN.org.
320   \global\let\Hy@saved@currentHref\@currentHref%
321   \tfn@hyperfootnotes{\hyper@makecurrent{Hfootnote}}{}}%
```

```

322 \global\let\Hy@footnote@currentHref\@currentHref%
323 \global\let\@currentHref\Hy@saved@currentHref%
324 }
325

```

`\tfn@footnotetext` `\tfn@footnotetext` contains the `\footnotetext[...]{...}` command and handles the numbering. `\tfn@footnotetext` will be executed after the table. The foot note counter has been increased automatically with each `\footnotemark`, therefore it must be reset to its value before the table began.

```

326 \newcommand{\tfn@footnotetext}[2] [] {%
327   \ifx\tfn@footnotetableprint\tfn@footnotezero%
328     % This is the first footnotetext after the (sideways)table.

464 \gdef\tfn@fnt{1}%
465 }
466

```

`\tfn@swtbox` For sideways tables the `\tfn@tablefootnoteprintout` is placed in a `\parbox`, which can be placed at the end of the `sidewaystable`:

```

467 \newcommand{\tfn@swtbox}{%
468   \ifvoid \footins%
469     \vskip 2\baselineskip%
470   \else%
471     \vskip \skip\footins%
472   \fi%
473   \parbox[b] [] [t]{\linewidth}{\raggedright\tfn@tablefootnoteprintout}%
474 }
475

```

`\tfn@tablefootnoteprintout` shall be executed after the end of the table environment. The `etoolbox` package provides very easy syntax for this:

```

476 \IfFileExists{etoolbox.sty}{%
477   \RequirePackage{etoolbox}[2011/01/03]%   v2.1
478   \AfterEndEnvironment{table}{%
479     \ltx@ifpackageloaded{footnotebackref}{%
480       \LetLtxMacro{\tfn@currentmft}{\@makefntext}%
481       \LetLtxMacro{\@makefntext}{\tablemakefntext}%
482       \tfn@tablefootnoteprintout%
483       \LetLtxMacro{\@makefntext}{\tfn@currentmft}%
484     }{% footnotebackref not loaded
485       \tfn@tablefootnoteprintout%
486     }%
487     \gdef\tfn@fnt{0}%
488   }%

```

When the rotating package has been loaded, we need to detect whether the `\tablefootnote` is placed inside of a `sidewaystable`.

```

489 \ltx@ifpackageloaded{rotating}{%
490   \AtBeginEnvironment{sidewaystable}{%
491     \gdef\tfn@swt{1}%
492   }

```

At the end of `sidewaystable` environments `\tfn@swtbox` shall be placed (if there was any `\tablefootnote` in that `sidewaystable` at all). And `\tfn@swt` as well as `\tfn@fnt` must be reset to 0.

```

493   \AtEndEnvironment{sidewaystable}{%
494     \ifx\tfn@fnt\tfn@footnotezero% \relax

## 6 Installation

### 6.1 Downloads

Everything is available on CTAN: <http://www.ctan.org/>, but may need additional packages themselves.

`tablefootnote.dtx` For unpacking the `tablefootnote.dtx` file and constructing the documentation it is required:

- T<sub>E</sub>X Format L<sup>A</sup>T<sub>E</sub>X 2<sub>ε</sub>: <http://www.CTAN.org/>
- document class `ltxdoc`, 2007/11/11, v2.0u, <http://www.ctan.org/pkg/ltxdoc>
- package `holtxdoc`, 2012/03/21, v0.24, <http://www.ctan.org/pkg/holtxdoc>
- package `hypdoc`, 2011/08/19, v1.11, <http://www.ctan.org/pkg/hypdoc>

`tablefootnote.sty` The `tablefootnote.sty` for L<sup>A</sup>T<sub>E</sub>X 2<sub>ε</sub> (i. e. each document using the `tablefootnote` package) requires:

- T<sub>E</sub>X Format L<sup>A</sup>T<sub>E</sub>X 2<sub>ε</sub>, <http://www.CTAN.org/>
- package `letltxmacro`, 2010/09/02, v1.4, <http://www.ctan.org/pkg/letltxmacro>.
- package `ltxcmds`, 2011/11/09, v1.22, <http://www.ctan.org/pkg/ltxcmds>

When the `hyperref` package is used, also the `ifluatex` package is needed, but it is already loaded automatically by the `hyperref` package.  
When the `etoolbox` package is available, it is used:

- package `etoolbox`, 2011/01/03, v2.1, <http://www.ctan.org/pkg/etoolbox>.

`tablefootnote-example.tex` The `tablefootnote-example.tex` requires the same files as all documents using the `tablefootnote` package and additionally:

- class `article`, 2007/10/19, v1.4h, from `classes.dtx`:  
[CTAN:macros/latex/base/classes.dtx](http://www.ctan.org/macros/latex/base/classes.dtx)
- package `rotating`, 2009/03/28, v2.16a, <http://www.ctan.org/pkg/rotating>
- package `float`, 2001/11/08, v1.3d, <http://www.ctan.org/pkg/float>
- package `placeins`, 2005/04/18, v2.2, <http://www.ctan.org/pkg/placeins>  
for `\FloatBarrier`
- package `hyperref`, 2012/11/06, v6.83m, <http://www.ctan.org/pkg/hyperref>
- package `tablefootnote`, 2014/01/26, v1.1c,  
<http://www.ctan.org/pkg/tablefootnote>  
(Well, it is the example file for this package, and because you are reading the documentation for the `tablefootnote` package, it can be assumed that you already have some version of it – is it the current one?)

`Oberdiek` All packages of HEIKO OBERDIEK’s bundle ‘oberdiek’ (especially `holtxdoc`, `ifluatex`, `letltxmacro`, and `ltxcmds`) are also available in a TDS compliant ZIP archive:  
`holtxdoc` [CTAN:install/macros/latex/contrib/oberdiek.tds.zip](http://www.ctan.org/install/macros/latex/contrib/oberdiek.tds.zip).  
`ifluatex`  
`letltxmacro` It is probably best to download and use this, because the packages in there are  
`ltxcmds` quite probably both recent and compatible among themselves.

**hyperref**      hyperref is not included in that bundle and needs to be downloaded separately, <http://www.ctan.org/install/macros/latex/contrib/hyperref.tds.zip>.

**Münch**      A hyperlinked list of my (other) packages can be found at <http://www.ctan.org/author/muench-hm>.

## 6.2 Package, unpacking TDS

**Package.** This package is available on **CTAN**:

**CTAN:macros/latex/contrib/tablefootnote/tablefootnote.dtx**  
The source file.

**CTAN:macros/latex/contrib/tablefootnote/tablefootnote.pdf**  
The documentation.

**CTAN:macros/latex/contrib/tablefootnote/tablefootnote-example.pdf**  
The compiled example file, as it should look like.

**CTAN:macros/latex/contrib/tablefootnote/README**  
The README file.

There is also a `tablefootnote.tds.zip` available:

**CTAN:install/macros/latex/contrib/tablefootnote.tds.zip**  
Everything in TDS compliant, compiled format.

which additionally contains

<code>tablefootnote.ins</code>	The installation file.
<code>tablefootnote.drv</code>	The driver to generate the documentation.
<code>tablefootnote.sty</code>	The <code>.sty</code> file.
<code>tablefootnote-example.tex</code>	The example file.

For required other packages, please see the preceding subsection.

**Unpacking.** The `.dtx` file is a self-extracting `docstrip` archive. The files are extracted by running the `.dtx` through plain  $\TeX$ :

```
tex tablefootnote.dtx
```

About generating the documentation see paragraph 6.4 below.

**TDS.** Now the different files must be moved into the different directories in your installation TDS tree (also known as `texmf` tree):

<code>tablefootnote.sty</code>	→ <code>tex/latex/tablefootnote/tablefootnote.sty</code>
<code>tablefootnote.pdf</code>	→ <code>doc/latex/tablefootnote/tablefootnote.pdf</code>
<code>tablefootnote-example.tex</code>	→ <code>doc/latex/tablefootnote/tablefootnote-example.tex</code>
<code>tablefootnote-example.pdf</code>	→ <code>doc/latex/tablefootnote/tablefootnote-example.pdf</code>
<code>tablefootnote.dtx</code>	→ <code>source/latex/tablefootnote/tablefootnote.dtx</code>

If you have a `docstrip.cfg` that configures and enables `docstrip`'s TDS installing feature, then some files can already be in the right place, see the documentation of `docstrip`.

### 6.3 Refresh file name databases

If your  $\text{\TeX}$  distribution ( $\text{\TeX}$ live,  $\text{mik}\text{\TeX}$ , ...) relies on file name databases, you must refresh these. For example,  $\text{t}\text{\TeX}$  users run `texhash` or `mktextlsr`.

### 6.4 Some details for the interested

**Unpacking with  $\text{\LaTeX}$ .** The `.dtx` chooses its action depending on the format:

**plain  $\text{\TeX}$ :** Run `docstrip` and extract the files.

**$\text{\LaTeX}$ :** Generate the documentation.

If you insist on using  $\text{\LaTeX}$  for `docstrip` (really, `docstrip` does not need  $\text{\LaTeX}$ ), then inform the `autodetect` routine about your intention:

```
latex \let\install=y\input{tablefootnote.dtx}
```

Do not forget to quote the argument according to the demands of your shell.

**Generating the documentation.** You can use both the `.dtx` or the `.drv` to generate the documentation. The process can be configured by a configuration file `ltxdoc.cfg`. For instance, put the following line into this file, if you want to have A4 as paper format:

```
\PassOptionsToClass{a4paper}{article}
```

An example follows how to generate the documentation with  $\text{pdf}\text{\LaTeX}$ :

```
pdflatex tablefootnote.dtx
makeindex -s gind.ist tablefootnote.idx
pdflatex tablefootnote.dtx
makeindex -s gind.ist tablefootnote.idx
pdflatex tablefootnote.dtx
```

### 6.5 Compiling the example

The example file, `tablefootnote-example.tex`, can be compiled via

```
latex tablefootnote-example.tex,
lualatex tablefootnote-example.tex,
```

or (recommended)

```
pdflatex thumbs-example.tex
```

and will need at least two compiler runs to get everything right.

## 7 Acknowledgements

I would like to thank HEIKO OBERDIEK for providing the `hyperref`, `ifluatex`, `letltxmacro`, `ltxcmds`, as well as a lot (!) of other useful packages (from which I also got everything I know about creating a file in `.dtx` format, OK, say it: copying), and for information about the  $\text{pdf}\text{\TeX}$ -bug, ARNO TRAUTMANN for reporting the bug of misplaced hyperreferences in `sidewaystables` using  $\text{Lua}\text{\TeX}$ , independently of the `tablefootnote` package or footnotes at all, THOMAS V. for reporting the bug of not handling the case of `hyperref` option `hyperfootnotes=false`, SVERRE STAUSLAND JOHNSEN for reporting the bug in case of *not* using `hyperref`, and the [news:comp.text.tex](mailto:news:comp.text.tex) and [news:de.comp.text.tex](mailto:news:de.comp.text.tex) newsgroups as well as everybody at <http://tex.stackexchange.com> for their help in all things  $\text{\TeX}$ .

## 8 History

[2011/10/26 v1.0a, tabfootn]

- Upload to [CTAN:macros/latex/contrib/tablefootnote/](http://CTAN:macros/latex/contrib/tablefootnote/).

[2011/10/29 v1.0b]

- Renamed to tablefootnote.
- Added support for the `sidewaystable`-environment of the `rotating` package.
- Diverse changes in documentation and README.

[2011/11/06 v1.0c]

- Replaced `^{\text{\thefootnote}}` by `{\text{\textup{\thefootnote}}}`.
- Bug fix: When `etoolbox.sty` was not found, and the float package had been loaded, and the float specifier was H, then the `\tablefootnotes` were not printed for that table. Fixed.

[2011/11/19 v1.0d]

- Replaced `{\text{\textup{\thefootnote}}}` by `\textsuperscript{\thefootnote}`, therefore the `amstext` package is no longer required by the `tablefootnote` package.
- `lscape` and `pdflscape` package now work with `tablefootnote` (except for using a `sidewaystable` on a landscape page).
- Added information about footnotes in `sidewaystable` being printed one below the other, even if `footmisc` package with option `para` is used.
- Redefined `\tfn@swtbox` from

```
\vspace{0.8cm}%  
\begin{spacing}{0.1}%  
\subcaptionbox*{}[\linewidth][l]{\tfn@tablefootnoteprintout}%  
\end{spacing}%
```

to

```
\vspace{2\baselineskip}%  
\parbox[b][t]{\linewidth}{\raggedright\tfn@tablefootnoteprintout}%
```

, therefore the `setspace` and `subcaption` packages are no longer required by the `tablefootnote` package.

- No longer uses `\numexpr`, therefore also usable without  $\epsilon$ -TeX.
- Replaced `\textsuperscript{\thefootnote}` by `\hbox {\@textsuperscript {\normalfont \thefootnote } }`, which is next to the original definition of `\@makefnmark` (`\hbox {\@textsuperscript {\normalfont \@thefnmark } }`), but according to `\show\@thefnmark` here `\@thefnmark` is `{\protect \itshape}` instead of `\thefootnote`.

- Added an error message, when LuaTeX, rotating package, and hyperref package are used together. Hyperreferences in `sidewaystables` are misplaced, independently of the `tablefootnote` package or footnotes at all. (Bug reported by ARNO TRAUTMANN, 2011/11/15 – thanks!)
- Added `footnotesymbol-footnote-numbers` in the example.

#### [2011/11/26 v1.0e]

- Check for `hyperref` is only done once.
- Message regarding the misplacement of hyperlinks by LuaTeX changed form error to warning.
- Replaced `\vspace{2\baselineskip}` by

```
\ifvoid \footins%
\vskip 2\baselineskip%
\else%
\vskip \skip\footins%
\fi%
```

between the `sidewaystables` and their footnotes.

- The warning about un-regarded `para`-option of `footmisc` package is only given at the second `tablefootnote` in a `sidewaystable`, not repeatedly for every `tablefootnote` in a `sidewaystable`.

#### [2012/01/01 v1.0f]

- Bugfix: Wrong installation path given in the documentation, fixed.
- Update of documentation, README, and `dtx` internals.

#### [2012/01/14 v1.0g]

- Bugfix: There was a `relax` instead of a `\relax`, fixed.

#### [2012/07/29 v1.0h]

- `tablefootnote` is now compatible to the new `footnotebackref` package, 2012/07/01, v1.0, <http://www.ctan.org/pkg/footnotebackref>.

#### [2014/01/08 v1.1a]

- Tablefootnotes now regard optional footnote marks: `\tablefootnote[ custom mark here! ]{...}`
- Bug fix: the case of `hyperref` option `hyperfootnotes=false` was not handled at all. (Bug reported by THOMAS V., 2014/01/02 – thanks!)
- A lot of details.

#### [2014/01/20 v1.1b]

- Bug fix: Package was broken when `hyperref` was *not* used. (Bug reported by SVERRE STAUSLAND JOHNSEN – thanks!)

[2014/01/26 v1.1c]

- The emergency bug fix of version 2014/01/20 v1.1b was replaced by using the new robust macro `\tfn@hyperfootnotes`, which only *internally* uses `\ifHy@hyperfootnotes`. If the `hyperref` package is not used,  $\LaTeX$  now does not see any confusing `\ifHy@hyperfootnotes... \else... \fi` at all.
- URLs and README updated.

When you find a mistake or have a suggestion for an improvement of this package, please send an e-mail to the maintainer, thanks! (Please see BUG REPORTS in the README.)

## 9 Index

Numbers written in *italic* refer to the page where the corresponding entry is described; numbers underlined refer to the code line of the definition; plain numbers refer to the code lines where the entry is used.
